

Computer Forensics and Electronic Discovery are becoming routine in, but not limited to, cases such as:

Divorce

Intellectual Property Theft

Commercial Disputes

Contract Disputes

Employment Matters

Discrimination

Harassment

All investigations are performed by Certified Computer Examiners

COMPUTERS ARE UNINTENTIONAL DIARIES OF PEOPLE'S PAST, CURRENT, AND FUTURE ACTIVITIES.

www.forensicdiscoveries.com

A full service, one-stop litigation support technology provider, offering a broad spectrum of electronic discovery and forensic services.

SERVICES

Forensic Discoveries provides the ability to search and analyze electronic evidence. The evidence we analyze includes computer hard drives, portable storage, cell phones, Blackberrys, portable music players, and personal digital assistants (PDAs) just to name a few. All aspects of evidence will be verified, and then duplicated prior to any investigation to ensure the integrity of the evidence for litigation purposes.

We are a specialized data services company that was formed on the understanding that the role of your client's IT department is to maintain and advance business initiatives, not respond to litigation. Due to the importance of the matter, responding to litigation requests requires the personnel that are most valuable to your client's IT department. The sacrifices of having your client's most valued employees responding to litigation will have a direct impact on your client's business initiatives.

WE FIND THE SMOKING GUN!

ELECTRONIC DISCOVERY & FORENSIC INVESTIGATIONS

Computer evidence can oftentimes be the deciding factor in both criminal and civil litigation. Investigations involving trade secrets, commercial disputes, employment matters, and harassment can be won or lost solely with the introduction of recovered e-mail and other electronic documentation. If an attempt has been made to delete, erase, or otherwise hide critical evidence, you need the competent data recovery capabilities of Forensic Discoveries.

OUR PROCESS

Consultation: The process will begin with a consultation session to ensure the appropriate services are provided to suit your needs.

Obtain the evidence: Forensic Discoveries will work with you to ensure proper and secure packaging to be shipped to our examination lab. If the evidence cannot leave the location, Forensic Discoveries will forensically collect and verify the evidence on site.

E-DISCOVERY CONSULTING

With experience in both small and large electronic discovery cases, Forensic Discoveries works with our clients to:

- Assist your department and your clients to proactively plan for electronic discovery to reduce the impact and costs to the organization.
- Lead or assist in responding to discovery requests if litigation does occur.
- Work directly with your clients to ensure that your client's company is complying with the rules governing the litigation.
- Work with you and your clients to identify, request, and work with electronic information when initiating litigation.

Forensic Analysis: While ensuring proper chain of custody procedures, Forensic Discoveries will conduct a thorough investigation of the evidence to recover and analyze the information needed that was determined in the consultation phase.

Reporting: The results of the forensic examination procedures and findings will be documented in a formal report including a summary of the findings and the information supporting the conclusion.

Expert Witness support: Forensic Discoveries will provide expert witness testimony as needed pertaining to the procedures and methodologies used in the investigation.
